

OFFICE OF THE CHIEF DATA OFFICER

Grow margin by knowing, keeping & growing your best customers

A customer & demand intelligence capability that turns transaction data into profit - with every play proven by experiment.

Presented by
Kattiya Charoenpakdee

Before: flying without instruments

No customer view

every shopper treated alike

Churn found too late

noticed only after they've gone

Marketing by gut

blanket discounts erode margin

Generic cross-sell

no 'what to offer next'

Reactive inventory

stockouts lose sale + basket

13% revenue invisible

guest sales untracked

Grow gross-margin profit - four jobs

KNOW	KEEP	GROW	STOCK
Who our customers are	Retain the valuable ones	Lift everyone else	The right products
<i>(segmentation)</i>	<i>(churn + win-back)</i>	<i>(cross-sell)</i>	<i>(demand forecast)</i>

Each opportunity priced in money to rank investment; each play proven by a controlled experiment before we scale.

WHY THIS WORKS

The answer is already in your data.

Every problem is the same gap - you don't yet know your customers. The fix isn't more discounts or new systems; it's turning the transactions you already collect into four profit decisions, and proving each one with a controlled test before you spend at scale. Low risk, measured return.

Flying blind -> a customer-knowledge gap -> know, keep, grow, stock

One capability, three questions answered

WHO

Segment customers

6 behavioural groups; 17% drive 70% of revenue

WHO'S LEAVING

Spot leavers early

flagged before they go, ranked accurately

WHAT TO OFFER

Recommend next product

personalised cross-sell, ~100x better than random

+ a demand forecast that sets profit-optimal stock, and a value model that ranks every lever.

BEFORE -> AFTER

What changes when data leads

CAPABILITY	BEFORE	AFTER
Customer understanding	One-size-fits-all	6 segments, prioritised by profit
Churn	Found after they leave	Scored early - 250-name, £0.7M rescue list
Marketing spend	Blanket, gut-led	Profit-thresholded + proven by control group
Cross-sell	Generic	Personalised next-best product
Inventory	Reactive	Forecast + margin-aware stocking
Guest revenue	13% invisible (£2.6M)	Sized & converted via loyalty

Where the money is: Protect, Rescue, Grow

- PROTECT - 70% of revenue, ~2% churn. Defend with loyalty & service, not discounts.
- RESCUE - 250 high-value lapsing, ~£0.7M at risk. One-time win-back, proven by control.
- GROW - 1,545 mid-tier with headroom. Cross-sell to lift spend, only where it's profitable.
- Loyalty also converts the £2.6M anonymous guest base into tracked members.

Six groups by value tier x lifecycle; priorities colour-coded.

Proven profit - and it scales

- ~£82k/yr extra profit here (+2.4% of profit)
- Rescue campaign: ~30 customers won back -> net ~£11k, about a 3x return.
- Bigger prize still: ~£0.7M at-risk + £2.6M untracked guest revenue to capture.
- Retention is the biggest lever; each play proven by a holdout control before scaling.

Projected uplift; conservative, sensitivity-tested.

Honest, business-first, evidence-led

- Business leads, technology serves - every model maps to a profit decision.
- Money on the metrics - results in money, not just model scores.
- Proven, not promised - controlled experiments before spending at scale.
- Candid about limits - assumptions stated, simple baselines respected.
- Reproducible - clean code, a warehouse, and documentation that doesn't drift.

What I can do for you

Stand up customer segmentation, churn early-warning, and cross-sell engines.

Turn your transaction data into ranked, costed, experiment-backed growth plays.

Deliver it reproducibly - warehouse, models, and an executive narrative leaders trust.
